Change of details to EUDB listing

EUDB 3011 should now go under the name of Graham Fisher (same address), Graham
is using the computer more than the original purchaser. He (Graham) also sends
the following information;

                                              EUDB no. 3011
                                              Maranatha
                                              211 Whitehill Road,
                                              Ellistown,
                                              Leicester.
                                              LE6 1ER
                                              31st December 1986

Dear David,
    *Further to your correspondense I would like to update some
of the entry into your database. Firstly I would like to change
the name from Mrs Margaret Theobald to Mr Graham Fisher. I
(Graham) also use the computer for business purposes, and as I
am still at school doing a computer studies O' level course, I
could be classified as a student user. At school I use the
RML 480Z alot and I am impresed, however my experience level
could go up to 3 and 5. Obviously my interests have changed as
have the things I might have a future possible use for. I would
be gratetful if my details could be as recorded as below.*

    EUDB Number = 3011 : Mr Graham Fisher
    'Marantha' 211 Whitehill road, Ellistown, Leicester 1LE6 1ER
    Telephone number = 0530 60726
    Type of user = 1 3 5 and exerience level = 3 5 RML 480Z
    Progs most used The Big3 BBCBASIC
    Future possible uses for WORSSTAR Elite Pascal
    Interested in : programing in general and for applications.

    *You or any other members of the group may be interested in
some of the following scratchpad locations :-*

*64312 (&FB38) contains current TCOL. Useful if you forget what
TCOL is being used! For example after PEEKing you may get the
value &F1. The F, which is equal to 15, is the text colour,
while the 1, the backgroun colour.*

*64313 (&fb39) contains current GCOL. The same rules as above
apply, first digit (in hex) foreground colour, second the
graphic backgroud colour.*

*64319 (&FB3F) contains ASCII value of the cursor character.
POKE 64319,161 will give a cursor character of the underline
shape.*

*64320 (&FB40) is the ASCII code for the chevron ()) prompt when
in MOS.*

64321 (&FB41) contains value of 32, which is blink rate of the cursor. PEEKing a lower value will give a higher blink rate.

64322 (&FB42) holds value 160 which is initial delay before a hey repeats. A lower value will shorten the delay.

64323 (&FB43) controls repeat rate of a key held down. Normally 16, a lower value will increase the rate.

64326 (&FB46) contains the ASCII value of the last key pressed or help down, and as well as being fast has the advantage over KBD in as much that KBD only returns the value of the last key pressed, if the key is held down KBD returns the value once and thereafter 0 until another key is held down.

64335 (&FB4F) contains the current screen size 32 or 40. Thus it is possible to alter this byte without clearing the screen, and have both types of display on the same line. There are some adverse side affects, especially when editing, but if used with care can be of good use.

664406/7 (&FB96/7) this stores the current X co-ordinate of the graphics pointer in 2 bytes. This is of course in relation to the origin not the screen. You could move the X co-ordinate by using DOKE 64406,new X position.

664408/9 (&FB98/9) contains the current Y co-ordinate of the graphics pointer, and is similar to as above

64410/1 (&FB9A/B) contains the X origin co-ordinate. These 2 bytes are updated when the ORIGIN command is used.

64412/3 (&FB9C/D) contains the Y origin co-ordinate.

All due thanks to the book 'Relatively Basic' for these.

    Yours sincerely

    Graham Fisher

        (Graham Fisher)

EINSTEIN MATTERS

3 Mayfield Avenue Scarborough North Yorkshire YO12 6DF
Phone (0723)-370691

10th. April 1987

Dear Einsteinner,

This package should contain the following contents...

12 sides of news, starting 'Hullo Einsteinners' and ending 'Graham Fisher'.
2 sides relating to AMTAT
1 side describing 'Software available to members'
7 sides describing volume by volume the 38 volumes of software available.
31 sides of members details, starting with 3001 and ending with 3283
1 side of members listing in alphabetical order
2 sides of members listing in county and post code order
3 sides referring to 'Moneyplan Accounts System'
3 sides relating to 'BRADFORD' enhanced print program utility

If there are any sheets missing please write or phone and I'll send the missing sheets on to you. There shouldn't be any BLANK sheets (except the back of this one) but it is always possible that one has slipped through the printer and gone undetected. If you find a blank sheet do not assume it is a test of your ingenuity - do not spend precious time trying to get the invisible ink to appear - it is a duff and another one will wing its way quickly so long as you shout out for it.

Subscriptions are about due. About a quarter of members have already paid their subs through to May 1988 so they can ignore this and get on with the rest of the goodies. For those who have not yet renewed can I please ask you to use the tear-off slip below, and the reply paid envelope which does not need a stamp, and send your subs as soon as convenient. Inevitably there has been a rise, the sheer weight of paper and printing costs forces this but also I find we are sending out a lot of info (and offering telephone advice) to new Einey owners and this has pushed costs up. We are taking a harder line towards non-members, we don't want to be mean and not answer cries for help from those newcomers who find themselves stuck but we cannot do this to the detriment of our paid up members.

Happy computing,

David

********** CUT HERE ********** CUT HERE ********** CUT HERE **********

I enclose £12 subscription to EUDB to take me through to May 1988.

I enclose a cheque / postal order OR

Please debit my ACCESS Card no .... expires ......

Signed _____ Date _____

My EUDB number is _____ If you have any amendments to your entry or address please list them on the back of this slip. Thanks.

HULLO Einsteiners.

Here is a goodly round up of news and information, I'm sorry it wasn't pushed out to you a month or so ago but I have just gone through my busiest time of year (regarding my business that is) and it has also been a lean time health wise and I just haven't been outputting work at the usual pace. Still, enough blathering and on wiv the motley.

HARDWARE REPAIR SERVICE

Richard White runs his own computer repair service under the name of ABARIS Computer Services at 10A Northgate, Sleaford, Lincolnshire NG34 7BJ. Day-time phone = 306153. Richard tells me that he runs an Einstein himself (and will soon be an EUDB member) and that he already services about 40 Einsteins at a nearby training school. He specialises in repairing micros and the bulk of his work is in keeping Spectrums together but he can of course deal with Einstein faults. Contact him in the first instance if your Einey is down. (Assuming of course that your guarantee period has expired).

EASIDATA II

Do you remember Easidata, the rather nice simple database which we used to circulate EUDB info on? Well does anybody know what happened to EASIDATA II which was supposed to be an 80 column business version. John Cantrill would like to know if it was ever distributed by Peter Noblett of Dean Software -- by the way Dean Software seem to have pulled right out of the Einey market. Any news direct to John please.

MERLIN SOFTWARE CATALOGUE

A new name but an old familiar friend. MERLIN Software is the name used by Blagbrough & Hebblethwaite of Halifax to market their software range. Interesting but not earth shattering news. BUT, BUT, BUT the good news is that Brian Thomas of B&H has produced a rather super and very comprehensive catalogue listing ALL KNOWN Einstein software and hardware. The catalogue runs to 78 A4 pages and lists books, hardware and software (categorised into educational, business, utilities, verticals etc etc.). A great reference manual. Brian will send you one for just 75 pence. I told him to charge a quid but the man insists on 75 pence (that incudes the catalogue AND the postage). A real bargain. I think we should say 'ta' to B&H for producing it. By the way although Brian has listed the recommended price of all the items he says you should always 'give him a bell' because he can often do you a better deal.

That old faithful work horse Alex Calderhead of Glasgow has been busy again.
He's only just recovered from the effort of typing in a massive database listing
he found in Personal Computer World (see freedisc 918) and now he has produced a
bit of gadgetry to help switch from 40 to 80 columns under software control. The
switch can be set up from BASIC or any other language which can access the user
port and the commands are very simple. He would like to sell them at a modest
price to recover his time and the components inside (there are a couple of
chips, wires, leads, sockets etc all contained in a neat box). The blurb below
reveals all, if you're interested contact Alex direct please.

   To connect it to the Einstein,switch off first,then connect the
ribbon cable to the User Port,with the small polarizing slots   on
the plug uppermost.

Using the existing six-pin Din cable,connect the grey cable   on
the switch to the Computer.
Connect the 80 COL card to the Phono socket next to the gray
cable.
Having done that,you can either connect it to the colour monitor
OR a monochrome monitor,NOT BOTH.
The black DIN cable goes to the TM01 moniter,and the mono monitor
connects to the other Phono socket.

Switch on the computer,the switch defaults to 40 COL on   power-
up,so the familiar Einstein logo should appear,if not check the
connections.No harm will be done to the computer or interface as
a result of wrong connections..

On side A of the disc there are two COM files.:

40COL.COM and 80COL.COM.

From DOS type 80COL,the screen should change to the 80 COL
format,typing 40COL should get you back into 40 COL mode.

I have the 80COL file on all my 80 COL software,and set the disc
to autoboot the file on power-up.I have set side B of the disc to
do just this.

The   switch can be set from within BASIC or any other language
that can access the user port.
The   file on side B of the disc called   14-3/80.XBS   demonstates
this.   **✗**
Load   XBAS+✓ and run the program,it starts off in 80 COL   mode,you
will be asked if you want to see the diagram,press Y,the   screen

*✱ =
PRESS
CTRL P.*

   then changes to the 40 COL mode and displays the diagram,on
pressing any key it switches back to 80 COL,and the program
continues in the text mode.

The commands to do this are simple:

At the start of the program place in a line the command:
OUT &33,15:REM THIS SETS THE PIO TO OUTPUT

The command to switch to 80 COL is:

OUT &32,1:PRINT CHR$(16):REM SET OUTPUT TO 80 COL

OUT &32,0:PRINT CHR$(14):REM SET OUTPUT TO 40 COL

RADIO HAMS / DRAGON OWNERS etc etc

You'll see that the members listing has been indexed for SURNAMES and also for
COUNTIES & POSTCODES. I know that there are a lot of radio hams out there and a
lot of Dragon owners. If you'd like to be listed (just your name and number and
call-sign) onto a RADIO HAMS list I'll be glad to circulate it. Likewise you
Dragon tamers, I'd be glad to produce a list of EUDB numbers and surnames of ex
Dragon men. Indeed I'd do this for any group of people who want to be on such a
list. Drop me a brief note and I'll add you onto the index to go out with the
next newsletter.

RADIO HAMS;	DRAGON MEN;
3277 Reddington	3277 Reddington

SOFTWARE FOR SALE

Richard McDermott of Micro-Computers (North Wales), Plas Heulog, Mountain Lane,
Penmaenmawr, Gwynedd LL34 6YP (Phone 0492-623492) has certain items of software
for sale. He no longer supports Einstein as he is interested in Amstrad but the
following are for disposal. Wordstar + Spellstar (Proffessional) + Datastar +
Infostar; this lot cost £455 but it is now on offer at £150 the lot plus VAT
plus postage. He also has a SQUIBBS DEMO MANUAL for £20. He also has DEMO
packages of he former New Miracle software at £15 each, namely SSASSY (for
garages) PHIAL (or Chemists) and MICRO-LANDLORD (for landlords). Contact
Richard direct in Wales please.

More software for sale

I also have for sale a very limited number of software items; for example
BBCBASIC plus MANUAL £15 (that includes postage etc)
DR LOGO and MANUAL at £15 (including postage etc)
Kuma WDPRO plus MANUAL at £15 (including postage etc) and
EASIDATA plus MANUAL at £15.
All the above items are new and unused, except for the Easidata which is second
hand but is the original disc and manual. Contact me personally for any of the
items mentioned.

BORED with COMPUTING?

I have to be honest, for me Einstein is a tool and I regret I don't have the

time to take him to bits or get heavily into software writing. In fact some computer buffs can become computer bores (present company excepted of course). But I NEVER become bored by the myriad uses to which our members put their machines. How about the new member (I shall spare his blushes in case he is embarrassed by the way I mention this)... who is using a statistical package and an Einey to record and investigate the patterns of the veins upon bees-wings? Now there is a man I'd love to meet. I've already mentioned Robert interested in stocks and share, John Cantrill into genealogy and if YOU have an unusual use for your Einey it would be interesting to hear detals.

A BBCBASIC Program

The following is from Michael Chew (EUDB 3259) and whilst I have been persueded on this occasion to publish the listing I think if you're interested in it you should contact Michael and do a swop for a ready keyed in version.

I enclose a listing of a menu/boot program that I use as a user interface to my application programs written in BBC basic.It sets up the function keys,displays the time and a boot menu.

The time program is 'cribed' from the BBC basic program disc without some of the error traps (you can display some very strange times if you wish)-I assume some intelligence on the part of the operator.

The menu part 'PROC_load' prints the boot menu (in 80-column format) and at line 450 waits 98 'ticks' for a key to be pressed and if no key is pressed it reads the clock and starts again.On line 510 it calls itself to trap any key presses which do not call for a specific response.

'PROC_TIME' on line 650 reads the inbuilt time function and can be used in any program to display the time from the last reset or switch-on.To save the chore of reseting the time I put a version of the program without 'PROC_setime' (and its call on line 20) on the same disc and 'CHAIN' it on exit from an application.All applications contain similar menus (or is it meni) with appropriate 'TAB' setings to display the time.

I set the disc to auto-boot and reduce the command line to the minimum by renaming 'BBCBASIC.COM' to 'B.COM' and saving the bootfile as 'A.BBC' so the command line is just fed the three hex values 42 20 41.

I hope this may be of use to a fellow user of BBC basic which I think should have been TATUNG's standard language for the EINSTEIN because of its better precision and features.

STOCKS & SHARES; PERSONAL PORTFOLIOS etc.

Robert Whitrow of Wales is very keen to get hold of a program which can keep track of his investments. He has been told by Tatung that there is a prog to do this but nobody at Tatung can give him more details. There is of course a GAME called Tycoon which is all about investing as a GAME (I'd like to see it as it is the nearest thing which I shall get to being wealthy) However, you may know better so can YOU recommend a program for Robert. It would of course be perfectly possible to set up the routines on either Cracker spreadsheet or on dBase II database management system, has anybody done it already? Once again I would be interested to know of any such things and I know Robert Whitrow would be delighted.

WORDSTAR

Just a quick word to all you lot who use naughty copies of Wordstar. You cannot INSTALL Wordstar under DOS version 1.11, so you're wasting your time. Try it under DOS 1.31 and I'm told that it works.

EUDB MEMBERS LISTINGS

One member thinks that the 32 page listing is great but it is difficult to keep it together and he thinks it ought to be stapled or bound. Well, I suggest you punch holes in it yourself and put it into a ring binder. But if you'd like a BOUND copy (just like your computer manuals), it can be done but at a cost. BOUND copies, wire binding inside a card cover are available if you really cannot live without them. The cost however is £1.00 to cover the binding costs and the post and packing.

SUPER NEWS FROM XTAL RESEARCH

Xtal Basic 4 is the bog-standard basic issued with Einsteins. Some members will also be using Xtal System Five which gives an enhanced basic plus a faster operating system (DOS Version 2.) and some other goodies. The cost of System Five was about £69 and it is available only direct from Crystal Research at Torquay. Trever Brownen now tells me that they have introduced a COMPILER. You know what a compiler is, it turns a basic program into a com program so that it can be run direct from the operating system without loading Basic, also it runs faster and also it cannot be listed and tampered with. The price of the Xtal Basic Compiler is FIVE POUNDS (yes, that is correct £5). You must send your original System Five disc back to Crystal to get it. (Please note that the original System Five disc is NOT the same as the original Master System Disc which everybody gets with their machine). Trevor says that henceforth the compiler will also be included on all new copies of the System Five. Now that is what I call back-up service.

Second EPROM Slot

---

the second eprom slot inside Einey is required to run Mike Baylis' super high capacity disc drive and also the silicon ram disc which we mentioned last time. C.B.Denman (EUDB 3070) is just one of several members who have mentioned whether it might be used for carrying customised chips, containing for example all your regular programs. Any ideas anybody - give C.B. himself a ring - or float some ideas via the newsletter.

MASS STORAGE ONTO VIDEO

I'm told by Trevor (M.D. at Crystal Research) that a normal domestic household video can be used to store data if it is output to the video via the serial port. You do need a black box to do the (modem like) work of modulating (or whatever they call it) the signals to get it onto video and Trevor airily informs me that such a box could be knocked up for under a hundred quid. If anybody would like to pursue this idea I for one would definitely be interested in buying a working prototype in order to back up my hard disk.... and I can envisage a great demand from other users so... come on budding entrepreneurs, I've given you ALL the same tip, who is going to do something with the idea?

AVON E.G.

You may have already heard but a new group in Avon now meets occasionally. It is no longer free (quite right too) but the local chief is Steven Ford at 74 Great Hayles Road Whitchurch Bristol BS14 4SJ. Steven is ex-directory so you must write to him if you want more details. Stamped addressed envelope is ESSENTIAL please.

SCREENS MICROs

Screens continue to bombard me with regular price lists, sensible prices too although I don't like their policy of using eye catching ads like '10 discs for £30' and then when you read the small print and add VAT and postage it comes to nearer £40. Be that as it is, they do issue these excellent price lists and if you don't receive them I suggest you write and ask to go on their mailing list.

Comms package

Robert Whitrow (EUDB 3113) has been given an IBM package which runs under PC-DOS or MS-DOS and is a comms package suitable for Hayes compatable modems at 300/1200 baud. Also he has two utility progs and they are on a five and a quarter inch disc. Robert would like to know if this can be used on Einey and anybody who can convert it for him will be welcome to adequate recompense. Contact him direct please. Robert also has some encryption routines and is

interested in cypher work generally. Any contact from others interested would be welcome. (Robert — try Eric Goode 3264).

Apropos Printers.

What you've never heard of an 'Apropos' printer? Shame on you man. Brian Phillips writes to say he has a Star SG10 and a Qen-Data Daisy Wheel. He can leave both connected when using the Quen-Data but not when using the Star. According to the manuals they are both compatible. Brian wonders if anyone else has met this problem?

The TATUNG PIPE

John Cantrill has two Einsteins and wants to know if two computers can be linked to one printer and, more importantly, is it possible to use the Tatung Pipe to chain the two computers to give a larger memory or other advantage? Any ideas direct to John please.

Change of details on EUDB listing

Michael Bowker (EUDB3117) has gone to Kathmandu — no honestly, he has. What's more he has Einstein with him. His address is c/o UNICEF, P.O.Box 1187, Kathmandu, Nepal. I don't think he'll have time to play with Einstein much (will it work?) but he'll be back over here by December 1988.

Grenville Lewis (3007) has also changed his address to 62 Old Oak Road, Kings Norton, Birmingham B38 9AJ .

Jeff Kearey (3160) has moved to 7 Hatchway, Kirtlington, Oxford .... sounds very pleasant but it hasn't got the 'Kathmandu' ring of romance.

Jonathan Neal (3040) and family have moved to 2 The Coppice, Off School Lane, Longton, Preston, Lancashire, Tel 0772-614768.

Phil Davis (3002) has moved over to BBC computing and wishes to be deleted from the EUDB list. However, Phil has for sale a number of items; a double drive, 80 column, mono monitor with bundled software and Einey for £250. Software; AMTAT at £18. Tasword and Tasprint at ££15. Monopoly at £8. Hitchkikers Guide at £10. Pelmanism/Tycoon at £5. And about twenty discs, either new at £25 for ten or used at £2 each. Phil would prefer buyers to call and inspect otherwise carriage charges must be added.

David Perriman (tel 041-620-2151) has got himself an Amstrad but passed his Einey on to his work-place. He has a range of software for sale (all genuine stuff) from Infostar database to progs going for a fiver.

Several games or games packs at £5. A Demon Modem for £50 and a Sure Shot joystick for £10.

Alasdair McIntyre (3196) has moved to 8 Youngmans, St Piers Lane, Lingfield Surrey RH7 6PN Tel Lingfield 835352 very close to his old address.

The BRAIN Magazine

The Brain is published by Syntaxsoft at £18 per annum. It hasn't been distributed since long before Christmas and the Publishers are now offering a 'bumper package' when they do finally get their act together. Meanwhile it seems almost impossible to contact them by telephone, either on their hot-line help-line or to place enquiries / orders about products. One member complains that the firm are hanging on to a printer manual he sent them and he is therefore stuck for getting a cable for his Sharp printer -- everybody gets behind from time to time (who am I to call the kettle black) but a big firm like Syntaxsoft shouldn't be keeping Users hanging around for so long.

DISCS at low prices.

Unbranded discs have been going around at a couple of quid each. They are said to be new although they come ready formatted (but not in Einstein format) and you need to ensure that you do transfer the Einey format onto them because otherwise you are in for problems. They are said to originate in Germany and although OK in Teac (Tatung) drives they do not seem to run well in other drives, notably the Hitatchi.
Meanwhile George Longden (3033) is able to supply new discs, branded and all legit at prices of £3.70 per single disc or £32 for ten. Although branded these discs are of various types apparently. Meanwhile down in the big sin city David Cummins (3088) says they charge up to £6 for a single disc but that the Argos chain are selling them at less than £30 for ten. The cheapest (good) discs I have heard about came from a Glasgow open-air market where some trader was flogging off old programs at £1 per time. Even if the Amstrad progs are junk the disc is worth twice that amount. Keep your own markets covered lads. However, this is a very fast moving market and it is back to the old problem. Do you shop around to save the odd few quid here and there or do you go back to your regular computer dealer who (when all is said and done) has to earn himself a living in order to stay in business in order to keep Einey serviced.

Joseph Lambourne (EUDB 3267) would like to buy a second hand printer. Anybody got one to trade?

TRANSFERRING FILES BETWEEN AMSTRAD AND EINSTEIN COMPUTERS.

The following info is from K.J.Bucklitch (EUDB number 3206) and shows the procedure for transferring files when the two computers are linked together (remember though that the 'standard issue' Amstrad doesn't have an RS232 port already supplied).
These procedures are NOTHING to do with using the AMTAT emulator disc - an altogether different and easier procedure for using AMTAT is supplied with eah AMTAT disc.

FILE_TRANSFERS

1. CABLES.
a) Connect RS232C Serial Interface to the Amstrad. Insert 9v power supply. Switch on at main power supply,(Wall Socket)
b) Connect RS232 cable (DIN plug) to RS232 socket on right hand side of the Einstein. (Note White stripe to white dot.) Connect D-plug of cable to interface.
    Switch on Einstein.

2. LOADING SOFTWARE.
         Instruction.   Action
a) Amstrad.
   Insert CP/M disc into Amstrad.
   Load CP/M   Type... !CPM. <ENTER>
   Set Baud Rate   A> SETSIO,300 <ENTER>
   Load PIP.   A> PIP   <ENTER>
Get Signal CP/M3 PIP Version 3.0   *

b) Einstein.
   Set up 80 column card.   CTRL-P   <ENTER>
   Set Baud Rate.   >B3   <ENTER>
                                       G0   <ENTER>
   Insert system disc.Load D.O.S.   CTRL-BREAK
   Load COPY   0:COPY   <ENTER>
   Get Star Prompt.   *

   Both machines are now ready to transmit/receive.

3.EINSTEIN TO AMSTRAD.
i) Set up Amstrad to receive.   *Filename=aux:[e]
                        The [e] echoes the file to the screen.
Press ENTER and the Amstrad will appear to lock up.

ii)Set up Einstein to transmit.   *Filename TO SRL:<E> <ENTER>

You will see the disc drive come into action, the file will appear on each screen and be stored in memory. You need to send an end of file marker to indicate completion of transmission and save file on disc.

    Send End of File marker.   *EOF: to SRL: <ENTER>
This will restore local control to the Amstrad keyboard and save the fie on disc under the chosen Filename.

AMSTRAD TO EINSTEIN

i) Set up Einstein to receive   *SRL: to Filename<E> <ENTER>
ii)Set up Amstrad to transmit.   *aux:=Filename<e> <ENTER>

iii)End of File marker.   *aux:=eof: <ENTER>

EUDB Newsletter for April is distributed to ALL Eudb members, including these
AMTAT related sheets even if the member is not an AMTAT user.

These sheets (without the remaining 50+ sheets of the EUDB news) are distributed
to those non-EUDB members who purchased AMTAT via the group.

AMTAT - the Amstrad to Einstein utility.
----

1 still have a dozen printed copies of the 'Brief Guide to AMTAT' available for
anybody who hasn't got one. It's first come first served and if you want one
please send an 18p stamp to cover return postage. If you don't receive your copy
from me back by return of post then you've missed the boat.

FREE SOFTWARE

The EUDB software collection contains one side of a disk all concerned with
Amstrad to Einstein compatability. A copy of the disc normally costs £2 but if
you bought Amtat through the group you are welcome to a complimentary copy of
the disc.... but I'd appreciate a stamp to return the disc and also (if you have
them) an adhesive address label. Also available is another volume upon which I
have put information relating to C/PM operations as it seems to me now, after
nearly six months experiece of AMTAT that the best feature about the AMTAT disc
is that it gets you a full and legitimate copy of C/PM. .

AMTAT and MICROPEN

Ian Deane (EUDB 3262) reports that the only program to run is the Install
program and the Repair sequence but neither enable full implementation on Einey

Alec and Amtat and Pip.

Alec Calderhead reports that the version of PIP on his C/PM disc was corrupted
and this prevented him copying files as per the manual. ACC corrected it for him
upon request. On a separate point it does sound as though more discs are getting
corupted in the post, I have had indications that this is happening in

Edinburgh, Glasgow, Newcastle and the Greater Manchester area. Any Post Office workers aware of any new machines etc that could be the culprit?

AMTAT and 'unofficial' disc drives.

D.J.Day (EUDB 3089) reports that his AMTAT1 works fine. AMTAT2 doesn't work at all. ACC have checked it for him and the only remaining idea is to blame the OPUS second drive which he has instaled although it has coped admirably with all the other stuff he's thrown into it during the past year. One of those intractable problems but just a thought. (P.S. With official Tatung second drives now available for less than £50 isn't it sensible to stick to Tatung if you're now shopping around for a second drive?)

AMTAT & Microdraft.

John Watts (EUDB 3168) reports that the Microdraft package apparently converts and will give a reult on DIR but he cannot get it to go any further although he thinks it is him rather than the program. I wouldn't bet on that John. Last thing he told me was he was going to double-check with ACC Computers.

MONEY-MANAGER

Bill Powell (EUDB ref 3245) has accessed Money Manager which is written in Mallard Basic, he couldn't get into the CPC Version of Money-Manager. Bill also sent a very concise method of starting up Amtat (additionally nice because of the explanations noted along the way) but sadly it won't reproduce sharp enough to print.

80 COLUMN CARDS

ACC computers say that the 80 column card is (advisable' when using AMTAT but it seems that it is really essential as very little C/PM Amstrad program will run under 40 columns. 80 Column cards cost about £50 and rumours persist that some of them have buggs on board - if yours doesn't work properly it needs to be taken back to the dealers, an 80 column card either works or it doesn't and I don't know of any way in which it could be installed wrongly or the blame passed to the user.

EINSTEIN   MATTERS

Einstein Users DataBase

SOFTWARE AVAILABLE TO MEMBERS

Our software collection is arranged into volumes, sometimes a volume is devoted entirely to a special subject and some volumes are a general collection of files. Future volumes are likely to be a general mixture of all sorts because it is extremely time consuming to create volumes on which the files relate closely to each other. Each VOLUME takes up one side of a disc, sometimes the disk is almost full, it is not possible (because of the time involved) to put two volumes onto one side of a disc even in those cases where there would be sufficient space.

You can usually buy blank discs from EUDB at reasonable prices. You may, of course send your own disc (most folk do most of the time) BUT please, please, please do make sure that it is taken out of the cellophane wrapper and formatted before you send it to me.

There is a copying charge of £2 per volume to cover the cost of postage and packing. There is no need to send a stamp to get your disc back. It is an enormous help if you can send an adhesive address label. If you use a 'jiffy bag' then the same bag will be used to return your disc.... don't cellotape your bag so securely that I cannot break into it. If you send discs in an ordinary envelope then they will be returned in an ordinary envelope. Discs are usually returned the same day, allow extra delays if you send your disc by recorded or registered delivery (this is not essential and all discs will be sent back to you by ordinary post). Remember the service runs on voluntary goodwill and although I try to copy discs immediately I do have to earn a living, I do go away on holiday and am occassionaly ill etc.

The software is sent out 'as is', that means that it should run but there are no guarantees of any sort given. There are programs in the collection which do the same work (sometimes better) as software which sells for twenty or thirty pounds - take the rough with the smooth is my motto. There is a lot of stuff on any one disc and I know from experience that many members have derived hours of fun and interest from any one disc. None of the programs are 'rubbish' although a few are the sort of silly little demo progs which beginners write. ALL programs have some value to somebody somewhere -- you can learn a lot by examining the listings. Many of the programs 'do something' and may spark off more ideas for you to follow up.

We do not (knowingly) distribute copyrighted software. If you think a piece of software is not legitimate please let us know and we will withdraw it if necessary.

If you need special equipment to run the volume we try to tell you in advance -- the main points to remember are that we cater for the ORIGINAL Einstein and most of the software will run on a single drive Einey. Two drives often make life easier, and if two drives are ESSENTIAL I try to remember to tell you. Everybody has 40 columns which is the standard but a lot of 80 column stuff will go onto 40 columns but can be difficult to read. (All my 'Discinfo' explanations on disc are readable in 40 columns even though I use 80 as standard). For SOME programs 80 columns is essential, but not many of this collection come into that category. If I say it needs C/PM I mean real C/PM and not Xtal DOS, and if it seems helpful to mention that something does run OK under DOS then I mention it. It doesn't matter at all whether you have a colour monitor or a TV etc.

We do welcome fresh contributions and material and ideas -- don't keep your discoveries to yourself - share them with other Einstein Owners, it is the only way that interest can be maintained in the machine. Please note that an explanatory leaflet is sent out with every volume explaining how to get it running and if you do have difficulties in accessing a disc I am always happy to talk on the phone briefly. - Have fun.

DISC 901

Calc makes Einey into a calculator. Q sets up function keys. Splat, Bedsheet, Groovy and Batadase come from
David Howell (3105) he will be pleased to hear from you. Pip and Type are of limited use but NSWEEP is worth
getting to know although of limited use on standard machines.

```
0: DERBY    .XBS : NSWEEP  .COM : NSWEEP  .DOC : PIP     .COM : TYPE    .COM
0: CALC     .XBS : SAINTS  .XBS : SPLAT   .XBS : BATADASE.XBS : Q       .XBS

72k Size, 116k Free, 190k Total
```

DISC 902

Disc 902 (and 903) are for those interested in communications - modems - Prestel and all that stuff. Many of
the files are logged of Telecom Gold by me, if nothing else they show you how to avoid the costly mistakes
which I personally made in the early days. the BBLIST came from Steve Carter (3015) and runs under Easidata
although you can display it to screen as it is. MCM717GM is a comms package in itself.

```
0: TG130186.   : 181285 .   : 18128502.   : REQUIEM .DIS : MCM712GM.COM
0: SAT1     .   : 070301AP.UFT : BBLIST  .EDF : -FREEDIS.902 : 0210-2  .UFT
0: 0210-3  .UFT : 0210-4  .UFT : 0210-5  .UFT : BBCSAT  .   : DISCINFO.902
184k Size, 4k Free, 190k Total
```

DISC 903

See info above on 902. This volume is similar. Two of the progs are repeated from disc 902 for convenience.
903 has another comms package (Modem7) and DATALINK which is modified from that listed in the Tatung User Mag.
PATCH is a 'disc doctor' type of utility (absolutely brilliant) which is a bit out of place in this volume.

```
0: PATCH   .COM : PATCH   .DOC : REQUIEM .DIS : BBLIST  .EDF : MODEM7  .COM
0: MODEM7  .DOC : DATALINK.SRC : DATALINK.COM : SUN1    .   : SUN3    .

DISC 931 and 932

These two volumes are the original ADVENTURE game and you really need two drives to run it (although there is a way it can be done on a single drive machine). You need BOTH volumes so make sure you send TWO sides of space for them, but it s only charged out as one volume.

```

```

I have at least another ten discs containing material for the collection but it is likely to be early June

before it is arranged into volumes. In future volumes will be issued more-or-less on a 'go out in the order they came in basis'

This will mean that each volume becomes less organised and more of a hotch-potch ---- but still great fun and still a good way of adding to your armoury of knowledge AND software concerning Einey.

Cheers David

4-04-87

WE USED TO INSIST UPON ALL ORDERS FOR FREE SOFTWARE TO BE MADE ON A SPECIAL ORDER FORM - BUT

IT IS NOW ACCEOPTABLE TO SEND YOUR ORDER ON A SLIP OF PAPEER (YOU ONLY NEED TO QUOTE THE

VOLUME NUMBER). If you do have other questions etc in your letters it wiould help to keep them separate.

P.S. Guess who didn't use a word-pro for this last bit?
