This computer was one of the original development machines (I think there were four), hence the black plastic case and soldering iro processing and spreadsheets with the odd game or two. It's been sitting carefully wrapped up and idle for years and I've kept it out of go to a new caring owner.

I have tested this computer and it runs just as it always did, hence the photo showing the boot-up screen. However, minimal soak tes perfect, as it is a 38 year old prototype and therefore a rare piece of history. Early microcomputers need technical knowledge to repai intended for collectors and technical experts in AS-IS condition. Please do not buy this item if you do not accept these conditions.

Tatung Einstein TC-01, Serial number BC022

220-240 Volt 50 Hz European power supply

Due to age sold AS IS
